About HPWINNER

Founded in 2011, with registered capital around USD 7.97 M (RMB 51.8 M), HPWINNER is the only one-stop „design house” in the LED industry that concentrates on building products in a vast market which are „tailor-made” for customers; creating high-power LED lights that allow customers to rely on a company with a solid backing.

Over 100 employees form the company design team, each having graduated from well known schools in China and overseas in the areas of optics, thermodynamics, industrial design, electrical engineering, information engineering, the arts, etc. The abilities of this powerful team gives HPWINNER unmatched technical strengths that have allowed it to apply for over 500 domestic and international patents. On average, the company applies for over one patent per week, and that speed is increasing. Therefore, it offers a secure backing for clients' intellectual properties. After many years of performance, HPWINNER has received recognition as a leader in both the industry and market due to its strength and high product quality.

One-stop service not only needs to be brimming with innovation. but also to pay attention to each detail and provide careful craftsmanship. HPWINNER owns a strong design and R&D force, but its biggest strength also lies in the ability to mass-produce. The production department is currently able to create 30,000 modules and 6,000 lamps per day. HPWINNER is now the No. 1 customer of Lumileds (top-4 chip suppliers) in high-power LED components. From the production materials, production of core components, down the assembly line, all the way to quality inspection, packaging, storage, and logistics, each process is methodically done in the pursuit of perfection.
