General Electric Co. is active in the following eight segments: Power & Water, Oil & Gas, Energy Management, Aviation, Healthcare, Transportation, Appliances & Lighting and GE Capital. GE Lighting is the professional division of General Electric specializing in lighting solutions all around the world.

The company was born for the exploit of the incandescent lamp patent by its founder, Thomas Edison. More than a century later, the lighting business still brings light to the world, helping advance new technologies such as LEDs, that operate with more efficiency, less cost and less environmental impact than ever before.

From the acquisition in 1990 of the equally long history Hungarian United Incandescent Lamp and Electricity Co., founded in 1896, GE are producing light sources under **TUNGSRAM** brand, too.
